Circular functions 2

**Solving circular functions equations:
equations involving sin, cos, and tan
student version**

Solving equations with circular functions

Use your calculator to find the angle θ .

for creativity
for insight

If the y coordinate of the blue point is 0.4, find the angle θ .

What other point on the circle has the same y coordinate as the blue point?

If α is any solution of the equation $\sin \theta = k$, which of the following are also solutions of the equation:

$$180 - \alpha$$

$$180 + \alpha$$

$$-\alpha$$

$$\alpha + 360$$

$$\alpha - 360$$

If α is any solution of the equation $\cos \theta = k$, which of the following are also solutions of the equation:

$$180 - \alpha$$

$$180 + \alpha$$

$$-\alpha$$

$$\alpha + 360$$

$$\alpha - 360$$

for insight

If $\cos \theta = \frac{2}{3}$, find $\tan \theta$ and $\sin \theta$.

for independence
for confidence
for creativity
for insight

Find $\tan \theta$ and $\sin \theta$ when:

$$\cos \theta = \frac{2}{3}, \text{ and } \theta \text{ is between } 270^\circ \text{ and } 360^\circ$$

$$\cos \theta = -\frac{2}{3}, \text{ and } \theta \text{ is between } 180^\circ \text{ and } 270^\circ$$

$$\cos \theta = -\frac{2}{3}, \text{ and } \theta \text{ is obtuse.}$$

for independence
